Statistical models beyond linear regression, April 2025

Table of Contents

- 1 $\text{T}_{\text{E}}\text{X}$, \LaTeX , Overleaf?
- 2 Motivation for using Overleaf
- 3 How it looks
- 4 How it works in practice

T_EX, L^AT_EX, Overleaf?

- T_EX
 - A typesetting program/language, originally for mathematical notation in documents.
 - Ultimate customization, very hard to use effectively.
- L^AT_EX
 - Built on top of T_EX, easier to use.
 - Popular in the natural sciences and quantitative political science for writing papers and presentations.
- Overleaf
 - An online L^AT_EX work space that allows collaboration and has pre-defined commands.
- **Think of L^AT_EX as R, and Overleaf as RStudio**

Why are you doing this to us? Isn't Rmarkdown enough?

- Rmarkdown is great when R codes are the center of your document, for reports, teaching materials etc.
 - If you want to write a full paper, presentation, etc, where R codes are not central, but:
 - You want to add nice regression tables or R code snippets.
 - You want to collaborate with others.
 - You want slightly more complex math
- In these cases \LaTeX might be a good option to consider

So why Overleaf?

- In **Overleaf** you can have all the customization of \LaTeX , **but** you do not have to.
- You can do a lot of stuff through drop-down menus like in Word or Google docs if you get lost
- You have hundreds of really cool templates that look nice and save you time (browse through templates of academic CVs for example)
- Real time collaboration, comments, restoring old versions etc. My best experience of co-authoring anything.

Final Motivation for L^AT_EX in Overleaf

- L^AT_EX lets you do fun and stupid stuff
- You can add coffee stains, halloween themes, all math and much more

$$Y = +\beta_1 \text{Year}_i + \beta_2 \text{Government}_i + \beta_3 \text{Election}_i + \beta_4 \text{Public Opinion}_i$$

```

TeX, \LaTeX, Overleaf?

- **TeX**
 - A typesetting program/language.
 - Originally developed mainly to deal with mathematical notation.
 - Ultimate customization, very hard to use effectively.
- **\LaTeX**
 - A software system for document preparation built on top of TeX pre-defined commands.
 - Easier to use.
 - Popular in quantitative political science for writing papers and conference presentations.
- **Overleaf**
 - An online LaTeX work space that allows collaboration.
 - KU has access to the premium version allowing seamless co-authoring (my home uni doesn't so take advantage of it).

This can be easier, right?

The screenshot shows the Overleaf Visual Editor interface. The top bar includes a 'Menu' button, a file explorer on the left, and a toolbar with buttons for 'Review', 'Share', 'Submit', 'History', 'Layout', and 'Chat'. The main editor area is titled 'polisciph_stats_blr' and shows a LaTeX document. The left sidebar contains a file explorer with files like 'coffee4.sty', 'debate_sentiment_right.csv', 'debatesentimentleft.csv', 'debatesentimentright.csv', 'denmark.csv', 'institute.png', 'Main.Rtex', and 'mycode.R'. Below the file explorer is a 'File outline' section with a tree view of the document structure.

Annotations in red boxes with arrows point to specific features:

- Visual editor**: Points to the 'Visual Editor' tab in the top toolbar.
- Font settings, sections**: Points to the 'Normal text' dropdown menu in the top toolbar.
- Insert tables, images, make lists**: Points to the 'Insert' button in the top toolbar.
- Have the PDF in a different window**: Points to the 'Show in PDF' button in the top toolbar.

The main editor area displays the following LaTeX code:

```
\TeX, \LaTeX, Overleaf?
```

- \TeX
 - A typesetting program/language.
 - Originally developed mainly to deal with mathematical notation.
 - Ultimate customization, very hard to use effectively. `\par`
- \LaTeX
 - A software system for document preparation built on top of \TeX , with pre-defined commands.
 - Easier to use.
 - Popular in quantitative political science for writing papers and conference presentations. `\par`
- Overleaf
 - An online \LaTeX work space that allows collaboration.
 - KU has access to the premium version allowing seamless co-authoring (my home uni doesn't so take advantage of it). `\par`

Below the code, there are two sections:

Motivation for using Overleaf

Motivation for \LaTeX in Overleaf

- Customize every small detail of typesetting, figures, tables, mathematical notation in \LaTeX
- In `\alert{Overleaf}` you can do all of it as well, **BUT** you do not have to.

Basic functions

```

3 \documentclass{article} % Select the class for your document
4
5 \usepackage{natbib} % Load packages, just like in R
6
7 \title{Stats are cool} % Define the title, author, date etc.
8 \author{Awesome political scientist (your name)}
9 \date{\today}
10
11 %%%%%%%%%%%%%%
12 \begin{document} % You have begin your document and set the title
13 \maketitle
14
15 %%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%

```

Basic functions

```

16 \section{First Chapter}% Define sections
17 Introduction to your cool \textbf{research} \LARGE{topic} % Set size of font with small,
normalsize, large, Large, LARGE, Huge, HUGE. You always have to revert back, it applies to
everything afterwards
18 \normalsize
19
20 \subsection{Numbered list}
21 \begin{enumerate} % Starting a sequence
22 \item First
23 \item Second
24 \end{enumerate} % You always have to end it.
25 % Seriously end it, Overleaf will scream at you otherwise :(
26

```

Basic functions

```
26
27 \subsection{Citations}
28 As \citet{hix_government-opposition_2016} argue in their article. Other research disputes this
   claim however \citep{rovny_party_2015}. % Cite in text or with complete parentheses.
29
30 \bibliographystyle{apalike} % Citation style
31 \bibliography{references} % print all used references
32
33 \end{document} % Again you have to end even the document
```

Basic functions

```

8 \usepackage{amsmath} % We need these packages now for math
9 \usepackage{graphicx} % figures
10 %%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
11 \begin{document}
12 \section{Math}
13 \subsection{Inline}
14 \Large Model defined as follows:  $Y = \alpha + \beta_1 X + \beta_2 Z$ 
15
16 \subsection{Display}
17 Model defined as follows:
18 \[Y = \alpha + \beta_1 X + \beta_2 Z\]
19
20 \section{Regression tables from R}
21 \input{regression_table} % Insert LaTeX regression tables from Stargazer in R
22 % could not be simpler, it is already in Tex format
23

```

Basic functions

```
23
24 ▾ \begin{figure} % insert figures
25 \centering % center
26     \includegraphics[width=1\linewidth]{uluru_ggplot.jpg}
27 ▾ \caption{Uluru mapped with ggplot and ggridge by @researchremora}
28 } % caption
29 \end{figure}
30
31
32
```

We can use R directly in Overleaf!

```
# Create a sequence of numbers
```

```
X = 2:10
```

```
# Display basic statistical measures
```

```
summary(X)
```

##	Min.	1st Qu.	Median	Mean	3rd Qu.	Max.
##	2	4	6	6	8	10

How it works in practice

- Setup Overleaf
- Copy my project
- Text basics
- Regression tables from R
- Graphs and figures
- Citations
